

WORKSHOP 8: Dendrometers

Estoril, 24 October 2014

Organisers: Patrick Fonti, Kathy Steppe &, Tanja Sanders

Agenda Friday 24 October 14:30-19:30 hours (coffee break 16:30-17:00)

Goal: define formatting for data collection and metadata

1) Assess variability of data format and metadata of participants (date format, frequency, adjustments, thermal corrections, dendrometer type...)

[prepared on evaluation of a form previously sent to participants?]

Example of data-cleaning: remove wrong measurement, jumps and gaps correction [Patrick L-tal]

→ agree on data formatting for training dataset and implement it (participants who wants will format their data accordingly and submit them for the training data set after the workshop)

2) Define what metadata are required (dendrometer-related, climate, dendrometric measures,..)

prepared on evaluation of a form previously sent to participants?

→ agree on metadata (and their format) for the training dataset

3) Implementing an (urgent) action plan for the training dataset

- define responsible and deadlines
